

Yantra- the game.

Yantra is a board game, played with tiles, by two to four players.

The board has 167 playing squares and 37 booster squares.

There are 87 playing tiles.

The tiles are divided into four colours: 20 red, 20 blue, 20 yellow, 20 purple

Each set is made up of 6x one, 4x two, 3x three, 2x four, 2x five, 2x six, 1x seven

There are 4x blank tiles,

There are 2x eight tiles.

Play commences after the players have decided who may begin.

Play starts on the central star with a sequence of choice..

Players select seven tiles and create sequences which have value when added.

The value of the sequence is increased when one or more of the booster squares are covered:

X squares multiply the value of the covering tile,

D(double), T(triple): multiply the total value of the sequence by 2x or 3x.

The central star doubles the value of the sequence.

The turn is complete when the score is noted.

The players replace the used tiles at the end of turn from the pool of remaining tiles.

The blank tiles can be played during a turn as part of a sequence representing a missing number,

And can be used as an intersection between sequences, rendering it dead for further plays,

Or, played as a turn for no score, by playing into or out of a sequence, by replacing an existing tile or vice versa.

The sequences follow numerical order ascending or descending from one to eight in one colour.

The players can create sequences of similar numbers, regardless of colour.

The eight tiles can be added to any seven tile in a sequence.

Bonus scores of 20 points scored for a seven tile play or a seven tile numerical sequence, 40 points if both occur in the same play.

If no play is possible player may skip turn or exchange tiles and miss turn.

The game ends when the last tile is used from one player or when no more plays are possible.

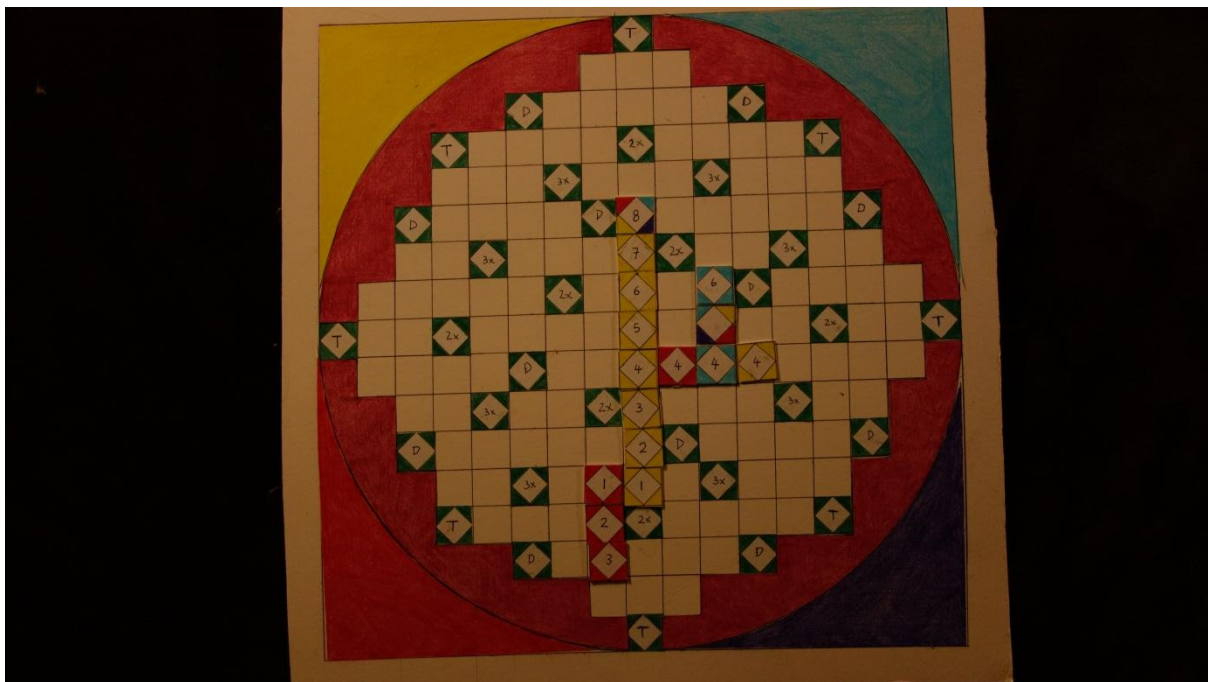

The player with the highest accumulated total wins.

Remaining tiles are subtracted from the player and added to the player who finished first.

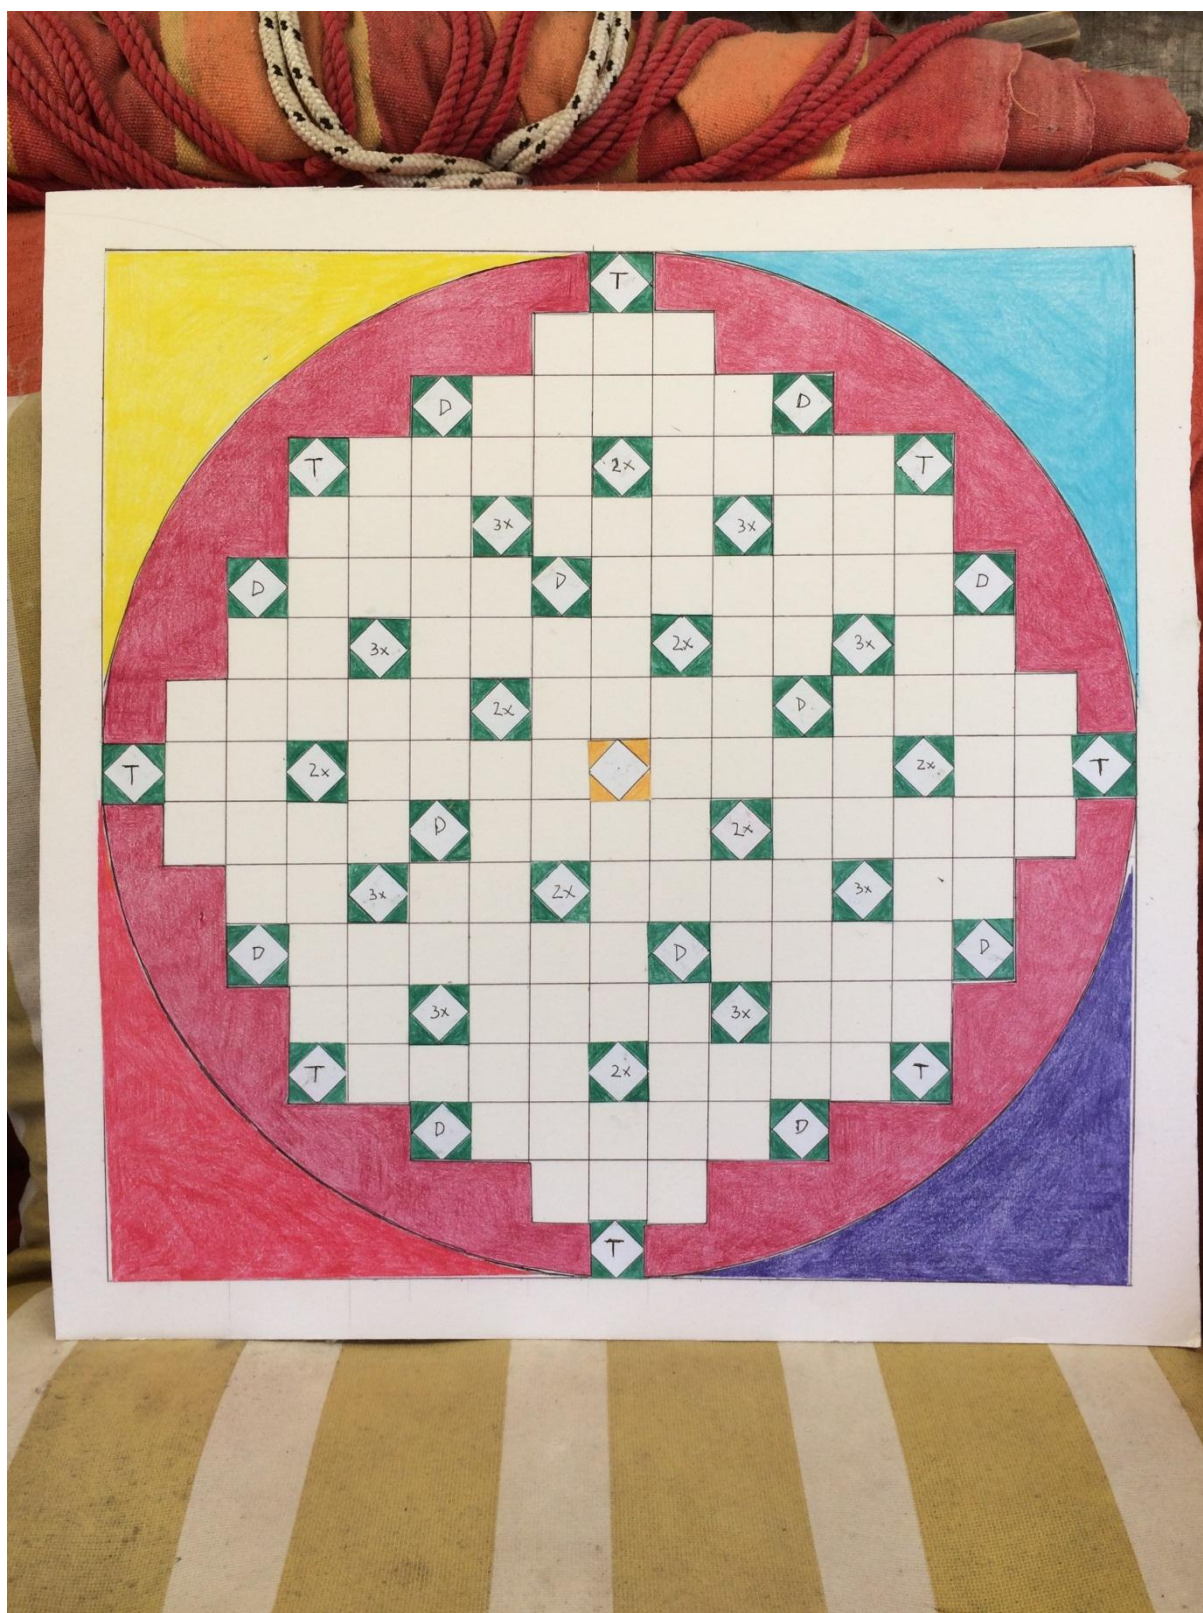

When the game ends with each player having remaining tiles the value of each players tiles is subtracted from their score.
